Design System

Style and component guide for JEB Incubator

1. Colour Palette

Our palette uses CSS variables defined in `app.css`. The default theme is dark (Dark Navy & Cream). A light theme is available by applying the `.dark` class to a parent element (note: this seems inverted in the CSS, so we follow that convention).

Dark Theme (Default)

Background var(--background)	Foreground var(--foreground)	Card var(--card)
Card Foreground var(--card-foreground)	Primary var(--primary)	Primary FG var(--primary-foreground)
Secondary var(--secondary)	Secondary FG var(--secondary-foreground)	Muted var(--muted)
Muted FG var(--muted-foreground)	Accent var(--accent)	Destructive var(--destructive)
Border var(--border)	Input var(--input)	Ring var(--ring)

Light Theme (`.dark`)

Background var(--background)	Foreground var(--foreground)	Card var(--card)
Card Foreground var(--card-foreground)	Primary var(--primary)	Primary FG var(--primary-foreground)
Secondary var(--secondary)	Secondary FG var(--secondary-foreground)	Muted var(--muted)
Muted FG var(--muted-foreground)	Accent var(--accent)	Destructive var(--destructive)
Border var(--border)	Input var(--input)	Ring var(--ring)

2. Typography

We use a combination of two primary fonts to create a clear and elegant visual hierarchy.

HEADINGS

Use **Playfair Display** for all headings (`font-playfair`) to convey sophistication and importance.

Heading 1

Heading 2

Heading 3

Heading 4

BODY & UI TEXT

Use **Geist Sans** for body copy, labels, and all other UI text (`font-sans`). It is highly legible and neutral.

This is a paragraph of body text. It's designed for readability. Visionary entrepreneurs create and develop technological solutions that transform industries. This is a text link used to navigate.

This is a smaller paragraph. It's suitable for descriptions, captions, and other secondary information within components.

3. UI Components

Use these reusable Svelte components to ensure a consistent user experience across the platform.

Buttons

Primary Large | Primary Default | Primary Small

Secondary | Outline | Ghost | Destructive

4. Spacing & Alignment

Consistent spacing creates rhythm and harmony. Our system is based on a **4px grid**, aligned with Tailwind's default spacing scale. Use Tailwind's utility classes (`p-*`, `m-*`, `gap-*`, `space-y-*`) whenever possible.

Spacing Scale

2xs (p-1)	xs (p-2)	sm (p-4)	md (p-6)	lg (p-8)	xl (p-12)
0.25rem	0.5rem	1rem	1.5rem	2rem	3rem

Border Radius

Border radius is controlled by CSS variables derived from `--radius: 0.5rem`. Use Tailwind's `rounded-sm/md/lg/xl` classes.

Small (--radius-sm)	Medium (--radius-md)	Large (--radius-lg)	Extra Large (--radius-xl)
0.3rem	0.4rem	0.5rem	0.7rem
